

PLANET SUPRA iBright

What Type of Paint is PLANET SUPRA iBright?

Q How does the indoors become bright?

A Compared to common interior paint, the light that is absorbed to the walls is minimal (high reflectance) Especially, PLANET SUPRA iBright effectively reflects the lights in 550nm wavelength, which gives feeling of brightness for people's eyes.

It has a property that irregularly reflects the light, which brightens the entire room.

Q How long is its lifespan?

A The life span of acrylic emulsion resin paint (PLANET SUPRA, etc.) which is susceptible to ultraviolet rays is approximately 10 years.

Considering the fact that the major cause of deterioration of paint is ultraviolet rays, iBright, interior paint which also is acrylic emulsion resin paint, may last longer than conventional paint.

Q Will there be any difference in the effect in the 10 years?

A Unless the surface become tainted heavily, there would be no significant difference in the effect.

On What Types of Material is PLANET SUPRA iBright Applicable?

Q Can PLANET SUPRA iBright be applied on any kind of walls or ceilings?

A PLANET SUPRA iBright can be applied on interior walls and ceilings of general materials, such as vinyl cloth, concrete, cement mortar, plaster board, etc.

On Application

Q Would base coat be necessary?

A Maximum effect of PLANE SUPRA iBright can be expected with the base coat of Base i or Base S. Use either base coats before application of PLANET SUPRA iBright.

Q What is the difference of Base i and Base S?

A BASE i is commonly used as base coat. If the basis material has stains etc. that could not be removed, use "BASE S" to prevent them from surfacing. Please apply either Base i or Base S as base coat.

Q Why does the application area of base coat has a range from 80~130m² per can?

A One of the purposes of using base coat is to make the coating surface flat, and the necessary amount of base coat depends on how the surface is uneven.

Q Can PLANET SUPRA iBright be applied with spray?

A Even if the diameter of the spray is large, the silica beads would probably stick together and become too large for it to be sprayed. Therefore, please apply with brush or roller.

Q Can PLANET SUPRA iBright be applied on sheets, not walls?

A PLANET SUPRA iBright is developed for fixed walls and ceilings, therefore, it is not very flexible. Sheets are often bended or folded, which can cause cracks on the painted surface. Therefore, we do not recommend painting on sheets.
