

Cornland International (Sweden) and Carbonergy Business Consultancy Services (Philippines) are proud to announce that Sumasalamin Sa Sun (Tagalog, meaning “Reflect the sun”) has been selected as one of ten finalists under the [Million Cool Roofs Challenge](#).

Sumasalamin Sa Sun will initially coat the roofs of approximately 100 low-income homes in the Cavite province on the island of Luzon in the Philippines. The team will also work with international and local charities to coat 50 homes in impoverished areas. To scale up, we will encourage business, industry, commercial and municipal establishments to adopt our thermal barrier paints.

We are equally proud to announce our partnership with the PLANARTH GROUP (Singapore and Japan) whose flagship product PLANET SUPRA – the world’s top thermal barrier paint reflecting just under 95% of near-infrared radiation – will be used under the Sumasalamin Sa Sun Initiative.

About our companies

Cornland International was established in 1999 as a platform for facilitating the emergence of new international environment and development initiatives, with an emphasis on providing energy services in developing countries while simultaneously addressing climate change.

Carbonergy, established in Manila in 2009, supports investment and provides technical assistance domestically and internationally in the areas of energy and climate change mitigation, including efforts to promote local investment in rooftop solar PV for private homes and businesses.

PLANARTH GROUP was established with the goal to help protect the environment and restore the earth’s natural beauty. Their line of thermal barrier paints reduces energy consumption and costs, while also reducing CO₂ emissions.
